Test Code	Test Name	Effective Date	Page #
<u>92530</u>	MaterniT21™ Plus (T21Q)	4/13/2015	

Dear Valued Client,

We are pleased to announce the availability of our Quest Diagnostics laboratory developed test for noninvasive prenatal screening, QNatal™ Advanced NIPS. This test has been developed, validated and is performed exclusively at Quest Diagnostics.

As a result, Quest will no longer offer the MaterniT21® PLUS prenatal test from Sequenom Laboratories. QNatal™ Advanced is a medically equivalent test with some enhancements. QNatal™ Advanced screens for common fetal aneuploidies including trisomies 21, 18, and 13 as well as fetal sex aneuploidies and select copy number variants. In addition, QNatal™ Advanced accurately measures and reports fetal fraction. The test methodology includes full end to end automation and a high depth of sequencing at 10 million reads.

QNatal Advanced™ NIPS is the latest addition to our extensive menu of Quest developed prenatal genetic screens and diagnostic tests for fetal aneuploidy. Our team of expert medical geneticists and genetic counselors can provide full continuity in evaluating your patients for risk of fetal chromosomal abnormalities.

New Test Offering

The following tests will be available through Quest Diagnostics on the dates indicated below.

QNatal™ Advanced	
Message	** This test is not available for New York patient testing. For New York patient testing use test code 91933-MaterniT21™ Plus (NY). **
Clinical Significance	The NIPT tests for fetal chromosomal abnormalities for trisomy 21, 18 and 13. In addition when a clear result is seen, will also report fetal sex aneuploidies, trisomy 16 and 22, and select microdeletions, including 22q (DiGeorge syndrome), 15q (Prader-Willi/Angelman syndromes), 11q (Jacobsen syndrome), 8q (Langer-Giedion syndrome), 5p (Cri-du-chat syndrome), 4p (Wolf-Hirschhorn syndrome), and 1p36 deletion syndrome as an additional finding.
Effective Date	4/13/2015
Test Code	92777
CPT Codes	81420
Specimen Requirements	10 mL (8 mL minimum) whole blood collected in each of two separate Streck cell-free (black/tan tiger top) tube
Instructions	Do not draw before 10 weeks gestation. Use Streck tubes only.
Transport Temperature	Room temperature
Specimen Stability	Room temperature: 7 days Refrigerated and Frozen: Unacceptable

Set-up/Analytic Time	Set up: Daily; Report available: 7-8 days																																																																																																																														
Reference Range	Accompanies report																																																																																																																														
Methodology	Next Generation Sequencing																																																																																																																														
Performing Site	Quest Diagnostics Nichols Institute, San Juan Capistrano
